

EXPERIMENT – 2

ROLL NO: 240701205

NAME: JAITHA K

Design a UI where users recall visual elements (e.g., icons or text chunks).
Evaluate the
effect of chunking on user memory.

FRAME 1: INSTRUCTION PAGE

Chunking Analysis of the Instruction Page

Chunking is a cognitive strategy that breaks down information into smaller, manageable units,

making it easier to process and retain. The visual memory task instruction page utilizes

chunking in the following ways:

- Logical Grouping of Information: The instructions inform users they will see visual

items, need to remember them accurately, and will be asked to recall them later.

- Visual Hierarchy and Design Elements: A bold, large title ("VISUAL MEMORY TASK")

grabs attention, while a highlighted "START" button signals the next step to keep

navigation intuitive.

- Simplicity and Clarity: The instructions use short, direct sentences to avoid unnecessary complexity.

MEMORY RECALL TEST

TRAIN YOUR BRAIN WITH YOUR GRIND.

INSTRUCTIONS TO PLAY:-

1. You will be shown several groups of icons or text.
2. Carefully observe each group during the viewing time.
3. Try to memorize as many items as possible.
4. After viewing, recall the items you remember.
5. You will have 5 seconds to view the items. Then, recall them on the next screen.
6. Accuracy in recall is more important than speed.

FRAME 2: CHUNKING PHASE

Analysis of the Visual Memory Task - Chunking Phase Screen

This screen represents the visual memory encoding phase, where users view and group items

mentally before recalling them.

- Countdown Timer (Top Left): A circular countdown (starting from 5) indicates that users

have a limited time to observe and memorize the items.

- Grid of Icons: A 4x3 grid displays various icons (camera, star, person, home, music

note, calendar).

- Chunking Strategy: These icons are visually distinct yet repeated, encouraging users to

group them by similarity (e.g., finding the two cameras, two stars, or two music notes) to

reduce cognitive overload.

Memorize the following images:-

FRAME 3: RECALL PHASE

Analysis of the Visual Memory Task - Selection Phase

This screen represents the memory retrieval stage, where users select the items they remember

seeing in the previous phase to test short-term memory retention.

- Title & Instructions: "SELECT THE IMAGES THAT YOU REMEMBER" provides a clear

instruction guiding the user's next action.

- Grid of Icon Choices: Six icons are presented. Some were in the previous phase (star, camera, calendar, person), while others are distractors (heart, lock) intended to evaluate memory accuracy.

- Selection Mechanics: Each icon has a checkbox below it, and a "SUBMIT" button

allows users to confirm their choices.

Recall the memorized image:-

Submit

FRAME 4: RESULT PAGE

Analysis of the Visual Memory Task - Score & Feedback Screen

This screen provides instant feedback on recall accuracy by showing the performance

evaluation based on the user's selections.

- **Score Display:** The final score is displayed as a fraction ($\frac{4}{4}$), showing the number of correct answers out of the total required.
- **Action Button:** An "EXIT" button gives the user control to end the task once they have reviewed their performance.
- **Cognitive Benefits:** This instant feedback helps users track their memory performance in a low-stress, gamified environment.
