

EXPERIMENT – 7

ROLL NO: 240701205

NAME: Jaitha k

Experiment with different layouts and color schemes for an app. Collect user feedback on

aesthetics and usability using GIMP(GNU Image Manipulation Program (GIMP)

AIM: The aim is to trial different app layouts and color schemes and evaluate user feedback on

aesthetics and usability using GIMP.

PROCEDURE:

Tool Link: <https://www.gimp.org/>

Step 1: Install GIMP

Download and install GIMP from the official website and set it up on your computer.

Step 2: Create a New Project

1. Open GIMP: Launch the GIMP application.
2. Create a New Canvas: Go to File → New, set dimensions (e.g., 1080×1920 pixels for a mobile screen).

Step 3: Design the Base Layout

1. Create the Base Layout: Use the Rectangle Select Tool to divide the screen into sections

such as header, content area, and footer. Fill sections using the Bucket Fill Tool.

Example Output: Base layout with header, content, and footer sections.

2. Add UI Elements: Use the Text Tool to add headers, labels, and buttons. Use Brush or

Shape Tools to create buttons and input fields.

Example Output: Layout with labeled sections and UI elements.

3. Organize Layers: Use layers to separate UI elements. Name layers clearly (e.g., Header, Button1, InputField).

Step 4: Experiment with Color Schemes

1. Create Color Variants: Duplicate the layout and modify colors using Bucket Fill Tool or Colorize Tool.

Example Output: Multiple color scheme variations of the same layout.

2. Save Each Variant: Export each version as separate files (e.g., Layout1.png, Layout2.png) using File → Export As.

Step 5: Collect User Feedback

1. Prepare a Feedback Form: Create a form using tools like Google Forms or Microsoft

Forms. Include questions about aesthetics and usability.

2. Share the Variants: Distribute layout images to users and provide instructions for viewing and responding.

3. Gather Feedback: Collect and analyze responses to identify the most preferred design.

Step 6: Iterate and Refine

1. Refine the Design: Improve layout and color scheme based on feedback and test

additional variations if required.

2. Final Testing: Conduct final testing to ensure usability and visual appeal are satisfactory.
