NAME: JAITHA.K

ROLLNO:240701205

Design input forms that validate data (e.g., email, phone number) and display error messages using HTML/CSS, JavaScript (with Validator.js)

AIM

The aim is to design input forms that validate data such as email and phone number, and display error messages using HTML, CSS, and JavaScript with Validator.js.

PROCEDURE

Step 1: Setting Up the HTML Form

Create an HTML form with input fields for email and phone number.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Form Validation</title>
  <link rel="stylesheet" href="style.css">
</head>
<body>
  <div class="container">
    <form id="myForm">
      <label>Email:</label>
      <input type="text" id="email">
      <span id="emailError" class="error"></span>
```

```
<label>Phone Number:</label>
<input type="text" id="phone">
<span id="phoneError" class="error"></span>
<button type="submit">Submit</button>
</form>
</div>
<script
src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.9.0/validator.min.js"><
/script> <script src="script.js"></script>
</body>
</html>
```

Step 2: Styling the Form with CSS

Add styling to improve the appearance of the form. `/* style.css */`

```
body {
  font-family: Arial, sans-serif;
  background-color: #f4f4f4;
  display: flex;
  justify-content: center;
  align-items: center;
  height: 100vh;
  margin: 0;
}
.container {
  background-color: white;
  padding: 20px;
  border-radius: 5px;
```

```
box-shadow: 0 0 10px rgba(0, 0, 0, 0.1); }
```

```
form {
```

```
display: flex;
```

```
flex-direction: column;
```

```
}
```

```
label {
```

```
margin-bottom: 5px;
```

```
}
```

```
input {
```

```
margin-bottom: 10px;
```

```
padding: 10px;
```

```
border: 1px solid #ccc;
```

```
border-radius: 3px;
```

```
}
```

```
button {
```

```
padding: 10px;
```

```
background-color: #28a745;
```

```
color: white;
```

```
border: none;
```

```
border-radius: 3px;
```

```
cursor: pointer;
```

```
}
```

```
button:hover {
```

```
background-color: #218838;
```

```
}
```

```
.error {
```

```
color: red;
font-size: 0.875em;
}
```

Step 3: Adding JavaScript for Validation

Use Validator.js to validate inputs and display error messages. // script.js

```
document.getElementById('myForm').addEventListener('submit', function (e)
{ e.preventDefault();
```

```
let email = document.getElementById('email').value;
```

```
let phone = document.getElementById('phone').value;
```

```
let emailError = document.getElementById('emailError');
```

```
let phoneError = document.getElementById('phoneError'); // Clear previous
errors
```

```
emailError.textContent = '';
```

```
phoneError.textContent = '';
```

```
// Validate email
```

```
if (!validator.isEmail(email)) {
```

```
emailError.textContent = 'Please enter a valid email address.';
```

```
}
```

```
// Validate phone number
```

```
if (!validator.isMobilePhone(phone, 'any')) {
```

```
phoneError.textContent = 'Please enter a valid phone number.';
```

```
}
```

```
// If valid
```

```
if (validator.isEmail(email) && validator.isMobilePhone(phone, 'any')) {
```

```
console.log('Email:', email);
```

```
console.log('Phone:', phone);
```

```
}
```

});
