

EXPERIMENT – 6

ROLL NO: 240701205

NAME: JAITHA K

Simulate the lifecycle stages for UI design using the RAD model and develop a small interactive interface using Axure RP

AIM: The aim is to demonstrate the lifecycle stages of UI design via the RAD model and develop a small interactive interface employing Axure RP.

PROCEDURE:

Tool Link: <https://www.axure.com/>

Simulating the Lifecycle Stages for UI Design Using the RAD Model

RAD Model (Rapid Application Development): The RAD model emphasizes quick

development and iteration. It consists of the following phases:

1. Requirements Planning: Gather initial requirements and identify key features of the UI.

Engage stakeholders to understand their needs and expectations.

2. User Design: Create initial prototypes and wireframes. Conduct user feedback sessions

to refine the designs. Use tools like Axure RP to develop interactive prototypes.

3. Construction: Develop the actual UI based on the refined designs. Perform iterative

testing and feedback cycles.

4. Cutover: Deploy the final UI. Conduct user training and support.

Axure RP Interactive Interface Development

Phase 1: Requirements Planning

1. Identify Key Features: Navigation (Home, Product Categories, Product Details, Cart,

Checkout, Order Confirmation, Order History). User actions (Browsing, Searching,

Adding to Cart, Checkout, Tracking Orders).

2. Create a Requirements Document: List all features and functionalities. Document user

stories and use cases.

Phase 2: User Design

1. Install and Launch Axure RP: Download and install Axure RP from the official website

and launch the application.

2. Create a New Project: Go to File → New and create a new project. Name the project (e.g.,

"Shopping App Interface").

3. Create Wireframes: Use the widget library to drag and drop elements onto the canvas.

Design wireframes for each screen such as Home Page, Product Categories, Product

Listings, Product Details, Cart, Checkout, Order Confirmation, and Order History.

4. Add Interactions: Select an element (e.g., button), go to the Properties panel, click on

Interactions, choose an interaction (e.g., OnClick), and define the action (e.g., navigate

to another screen).

5. Create Masters: Create reusable components like headers and footers using Masters

and drag them into wireframes.

6. Add Annotations: Add notes to describe each element's purpose and functionality using

the Notes panel.

Phase 3: Construction

1. Develop Interactive Prototypes: Convert wireframes into interactive prototypes by

adding interactions and transitions. Use dynamic panels to create interactive elements

such as carousels and pop-ups.

2. Test and Iterate: Preview the prototype using the Preview button, gather feedback from

users and stakeholders, and make necessary improvements.

Phase 4: Cutover

1. Finalize and Export: Finalize the design and interactions, then export the prototype as an

HTML file or share via Axure Cloud.

2. User Training and Support: Conduct training sessions to help users understand the

interface and provide documentation and support for any issues.
